Introduction

Use the Control4[®] Composer Media Edition (Composer ME) application to set up your media and playlists and perform other tasks related to your music, movies, and videos.

Purpose

The purpose of this document is to give you instructions, examples, and tips about how to add and manage the media for your Control4 system. This document applies to the Control4 Operating System 2.5.3 (OS 2.5.3).

Words that appear in red are either in the Glossary or provide tips, examples, and other important information.

What's new in this release?

The Control4 Composer Media Edition (Composer ME) software and hardware updates for OS 2.5.3 and earlier are detailed below.

New

- Cameras (enhanced support for third-party cameras, device control, MJPEG and H.264 support)
- WMA support

End-of-life products

- Media Player (C4-MP2-E)
- Wireless Fireplace Switch, 120VAC (C4-FS1-Z-N)
- Multi-Tuner V2 (C4-TUN2-E-B)
- XM Module for Multi-Tuner V2 (C4-XMOD)
- Dock for iPod (C4-IPDKTT1-E-B)

Getting started

Control4[®] Composer Media Edition (Composer ME) is the software you use to add, scan media, edit media information, and create playlists in the Control4 system for use with the Control4 Navigators. Using a Windows-based PC, this program uses a drag-and-drop interface and runs on the Control4 Operating System Release 2.0 (OS 2.0) and later.

The brain of the Control4 system is the Control4 controller (for example, HC-800 Controller). The controller communicates with Control4 and third-party products to enable home automation and interaction of Control4-controlled devices.

Notes: (1) The term "controller" referenced in this document refers to any Control4 product that contains the Director component; for example, HC-800 Controller. Director is the software that controls the system. (2) The new Sony STR-DA2800ES with Full Control4 Automation and Sony STR-DA5800ES with Full Control4 Automation also use Director.

Requirements

Control4 Composer ME requires that your system is functioning correctly before attempting to use this software. Talk to your Control4 dealer if this product does not function as documented; this may indicate that the Control4 system may not be set up properly.

Software and network requirements for using Composer ME:

- Control4 controller (for example, HC-800 Controller). **Note**: The Media Controller and Home Theater Controller are not supported in OS 2.0 and later as the Primary controllers (Secondary controllers only).
- PC to run the Composer ME software and control the devices.
- Composer ME (launches Microsoft .NET 1.1 web install).

- Microsoft operating systems supported (Windows 8, 7, or Vista). Mac support when used with a Windows virtual machine such as Parallels or VMWare Fusion for Mac.
- 500 MHz processor or higher.
- 256 MB RAM.
- 90 MB hard disk space.
- Video card and monitor supporting resolution of 1024 x 768 or higher.
- Keyboard.
- Mouse.
- TCP/IP-based home network (DSL/cable modem, Control4 secure gateway, router, or switch) to connect the PC to the controller.
- Internet connection (broadband required for retrieving cover art and media information).
- Registration at *MyControl4* is required. See your dealer or the *Control4 System Quick Start Guide* for details.

Installing Composer ME

Follow the steps below to install the Control4 Composer ME software.

Prerequisites

Ensure that you understand the software and network requirements to use this product. Your dealer or installer can assist you if needed.

To install Composer ME:

- 1 Start the Composer ME installation and follow the on-screen instructions. You might be asked for a registration key. If so, check with your dealer or installer for details.
- 2 If prompted to update, follow the on-screen instructions to update to the latest version of Composer ME.

The Composer ME software and device drivers may have been updated when the CD or web download was created. We recommend, however, that you always choose to update.

Starting Composer ME

When you start Composer ME, you must connect to Director on your home network.

Prerequisites

Ensure that you have installed Composer ME and registered on *MyControl4*. You may want to sign up for and use Rhapsody[®] also (a subscription-based music service). See the website for your service to learn how to run the music service in the Control4 system.

To start Composer ME:

- 1 From the desktop, double-click the **Composer ME** icon.
- 2 At the Composer ME startup screen, click **Director on Local Network**.

Composer	
	Connect to:
Exit Composer	Control

3 From the Directors dialog, select the Director's address of the controller you are setting up.

G Directors

- il Ofer reading and			

Tip: If the Director's address does not appear immediately, click the **Refresh** button. If it still does not appear, contact your dealer.

4 Click **Connect**. Composer ME opens to the main Composer ME interface.

Refreshing the Navigators

Use the Control4 Composer ME menu bar to refresh your touch screens, on-screen Navigators, MyHome apps, and System Remote Control whenever you make changes to Composer ME.

Prerequisites

• Ensure that the Navigators are added and identified to the Control4 system. Your dealer or installer can help you.

To refresh the Navigators:

1 In case your Navigators do not automatically refresh after you've made changes to Composer ME, from the menu bar, choose File > Refresh Navigators.

Tip: New media shows up automatically in the Navigators unless your device is disconnected or has changed locations. In this case, you may need to identify the device again.

Refer to the Control4 System User Guide to test your Navigator features.

Closing Composer ME

Use the Control4 Composer ME **File > Exit** or **Exit Composer** options to close the application.

Before Composer ME exits, the application asks you if you want to back up your project. It is always good practice to do so.

Introducing Composer ME

The Control4[®] Composer ME interface lets you:

- Scan media to your controller
- Create playlists of MP3, MP4, AAC, FLAC, or WMA files found through scanning.

Prerequisites

Ensure that Composer ME has been installed.

To use Composer ME:

- 1 Start Composer ME.
- 2 Connect to the **Director on Local Network**. (See "Director's Dialog" section below.)
- 3 View the Media pane (see below).

Composer ME interface:

Composer 2.1.0		
Ble Hedia Helo Mecila	Media Scanning	
Meda Source Offices Meda Source Offices Stated Stated Stated Stated Stated States Look Heads Look Heads Meda Paget Source Source Inductat Source Source Direct Autor Source Source Source	Options Scoreng Schedule Nevel Every Date Sunday Monday Tuenday Wednesday And Add. irector Statur: Ide	and here	Connected

When you add or scan media (Media Scanning Options), you can then view and select the stored/ broadcast media and playlists from the touch screens or onscreen Navigators: TV monitor, touch screens, MyHome apps, and System Remote Control (in 'List' format).

Directors dialog

After you start the Control4 Composer ME application, the following dialog appears; you need to use the controller's network address to connect to the Director.

Directors Dialog:

Name	Address	Connect
Steph	10111.1011.51	
gpeterson-desktop	10111102171	Cancel
virus-test-controller-1	10.11.205.30

home-controller-200	101111001100	 Refresh
- de la casa de la companya de la		Honosh

Connecting to a Director on the home network lets you set up your media cover art and metadata on your controller so it is viewable on the touch screens, MyHome apps, or on-screen Navigators. Each Director has an associated address.

Director's Dialog buttons:

- **Connect**—Connect to the Director on your controller.
- **Cancel**—Cancel and close the Director dialog.
- Add—Launch a dialog that lets you add the Director's address of the controller to which you are trying to connect.
- **Remove**—Lets you remove a Director.
- Refresh–Update the Director list to display the recently added Directors.

Media view

Use the Control4 Composer ME Media view to add or scan your media.

Media view (same view as the main screen after startup):

Steads
Media

There are two types of media that can be added or scanned in a Control4 system:

- Stored Media
- Broadcast Media

The other two categories are to scan media and manage playlists.

Note: The AMG lookup service has been switched to Gracenote^{*}. The Sony 777 Disc Changer uses Gracenote, but the Media Controller cannot access album, title, or artist information from AMG. CDs, however, can be imported and will show up in the Media database with a date and time stamp.

Other Media Managers: You can use other media managers, for example, iTunes, Windows Media player, and MediaMonkey to create MP3s, WMAs, or MP4s. You can still use Composer ME to add files to the Control4 system.

Stored media

Media types supported:

- **CD**—Store CD selections and view the Cover Art, Album, Artist, and Genre type (such as Rock or Country).
- **DVD** or **Disc Changer**—Store DVD and CD selections and view the Cover Art, Title, Info, Results, Media, and Disc List.
- **Digital Audio Player**—Store MP3, WMA, MP4, HDD, AAC, or FLAC music selections and view the Cover Art, Album, Artist, and Genre type (for example, Rock or Country) on a digital audio player.

• Network File Storage—Store MP3, WMA, MP4, HDD, AAC, or FLAC music selections and view the Cover Art, Album, Artist, and Genre type (for example, Rock or Country) on a hard disk attached to the network or a USB drive.

Broadcast media

Media types supported:

- **Direct TV**—View Direct TV channel options including Station ID, Genre, and Music Channel.
- **Dish Network**—View Dish Network channel options including Station ID, Genre, Rating, and Music Channel.
- **Cable TV**—View Cable channel options, including Station ID, Genre, Rating, Music, and Channel.
- **UHF/VHF**—View UHF channel options including Station ID, Genre, Rating, and HDTV.
- AM/FM—Scan AM and FM stations.
- Internet radio—Set up Internet radio stations.

Menu options

Composer ME menu options:

- **File menu**—Connect to the Director on your home network, refresh Navigator devices with new media information, or exit Composer ME.
- Media menu—Create a new playlist, or clear, export, and import media lists. See "Media Menu" below.
- Help menu–View the Composer ME online help and software version.

File

The File menu lets you perform project file management tasks, connect to Director, start Interviewer, and refresh Composer ME and the Navigators, including touch screens, MyHome apps (if they are online), and on-screen Navigators. The file management options relate to the Composer ME project files you back up on your PC (they have a .c4p extension). Project files always save by default to the 'My Documents' directory.

When you set up a Control4 system, you create live project configuration information on the controller that is backed up to a project file on your PC. This lists specific information about each system, including devices, connections, configuration, programming information, and media.

- **Connect to Director**—Connects you to the Director residing on the controller. When you connect, project configuration information from the controller is displayed on the Composer ME screen.
- **Disconnect from Director**—Disconnects you from the Director. Composer ME prompts you to back up your project before disconnecting you from the currently-connected Director. This option is available when connected to the Director.
- **Refresh**—Refreshes the Composer ME screen with the current information from Director.

- **Refresh Navigators**—Refreshes the Navigators with the latest information from Director. **Note**: MyHome for PCs and tablets must be updated in that app. MyHome for iPhone, iPod touch, iPad, and Android devices will update if online.
- **Exit**—Exits Composer. Composer ME prompts you to back up your project prior to exiting the software and returning to the desktop. Control4 recommends that you always back up your project before you exit.

File	<u>M</u> edia <u>H</u> elp	
	Connect to Director	
	Disconnect from Direc	tor
	Refresh	F5
	Refresh Navigators	Shift+F5
	E <u>x</u> it	

Media

From the Media menu, the media either has been scanned or manually added to the media database. After an item is added to the media database, the cover art and metadata about the media is viewable and selectable from any of the Navigators.

Tip: Control4 recommends that you use the Export Media List (see below) feature which lists of all your media saved to the hard drive on your PC.

The following options are available:

- **Clear Media List**—Clears the media list associated with the highlighted device from the media database.
- **Export Media List**—Exports a media list for the selected device from your controller to your PC.
- Import Media List-Imports a media list from your PC to your controller.
- Export Playlists—Exports a playlist from your controller to your PC.
- Import Playlists—Imports a playlist from your PC to your controller.
- Import DVD List from File—Imports a Microsoft Excel list of DVD titles for a disc changer.
- New Playlist—Creates a playlist of MP3, WMA, MP4, AAC, or FLAC files. The playlist is available from any touch screen or on-screen Navigator. Add albums, remove songs, re-order songs, etc. **Note**: If you remove songs from a playlist, it does not remove them from the media database.
- Delete Playlist-Removes a playlist.
- Rename Playlist—Renames a playlist.
- **Tag media files**—Used for OS 2.0 conversion of media files so all media players can see the same tags.

Help

From the Help menu, you can access the online help of this *Composer ME User Guide* with Index, Glossary, and Search options, or check the version of your Composer ME software and Director component.

Setting up media and playlists

Before you can view and select your media from the Control4 Navigators, the Control4 system needs to be able to recognize it. So you first need to add and scan your media to the controller using the Composer ME Media view. See "Auto-scan media in Composer ME" in this document.

Media Media Scanning Media Option Stated Serving Schedule Stated Serving Schedule Stated Serving Schedule State Media Serving Schedule Serving Schedule Serving Schedule Serving Schedule Serving Schedule Serving Schedule <t< th=""><th>Composer 2.1.0 File Media Help</th><th></th><th></th></t<>	Composer 2.1.0 File Media Help

To add and scan songs and albums for playlists, they must be available in MP3, WMA, MP4, AAC, or FLAC format on a PC, controller, or network share. With the MP3, WMA, MP4, AAC, or FLAC files you add and scan, you can create playlists and save them either to the controller's hard drive or a network storage drive.

Tip: Composer ME requires that your system is functioning correctly before using your media. For example, if you have a disc changer that does not appear in the left pane of the Media view, there's no disc changer in the system to add media to it. Contact your dealer if this is the case.

Prerequisites

Ensure that the appropriate devices have been added and identified to your Control4 system. Your dealer or installer can do this for you.

To add and scan available digital audio player media:

- 1 Start Composer ME and connect to Director.
- 2 In the Controller pane, click Add.

Tip: If you get a dialog box that states you cannot add media, make sure your dealer or installer has identified your controller to the system.

3 Browse to the directory of music files that you want to add or scan.

After the files have been added, the scan automatically starts. In a few moments, the media is scanned and you will see a list of albums appear. You might see the on-screen Navigator update during this process also.

Tip: Another way to add files from a network share to a controller is to go to the Windows Start menu, and select Run. Type //<controller's IP Address>/media/audio/music/<Artists>/<Albums> and copy the files there.

- 4 Refresh your Navigators.
- **5** The media is now selectable for viewing from the touch screens, MyHome apps, on-screen Navigators, and System Remote Control.

Setting up media on a controller

Each source device that can provide an audio stream, whether it is a disc changer plugged into the analog inputs on a Control4 Speaker Point or a controller, can provide audio to the Digital Audio servers. Each server must be able to connect to the Digital Audio cloud.

When configuring these connections (your dealer or installer can do this for you), there is always an open connection to the Digital Audio cloud for each Digital Audio server or Digital Audio client Consequently, you may see many connections to the Digital Audio cloud depending on the hardware that is configured in your project.

Prerequisites

Ensure that the appropriate devices have been added and identified to the Control4 system. Your dealer or installer can do this for you.

Procedure

To add and scan available Digital Audio Player media:

- 1 Start Composer ME and connect to Director.
- 2 In the Controller pane, click Add.

Tip: If you get a dialog box that states you cannot add media, make sure your dealer or installer has identified your controller to the system.

3 Browse to the directory of music files that you want to add or scan.

After the files have been added, the scan automatically starts. In a few moments, the media is scanned and you will see a list of albums appear. You might see the on-screen Navigator update during this process also.

- 4 Refresh your Navigators.
- 5 The media is now selectable for viewing from the touch screens, on-screen Navigators, and System Remote Control.

Setting up media on a CD or disc changer

When setting up a Control4 disc changer (or CD changer), you can add and scan media according to the controls available on your disc changer. Adding and scanning populates the media information to the media database, which lets you view the media from your touch screens, on-screen Navigators, MyHome apps, and System Remote Control.

Notes:

- The AMG c4lookup service from previous releases has been changed to Gracenote[®]. The Sony 777 Disc Changer uses Gracenote, but the Media Controller can no longer access album, title, or artist information from AMG (the previous lookup service). CDs, however, can be imported and will show up in the media database with a date and time stamp.
- Control4 has not implemented a UI for browsing CDs stored in a disc changer in OS 2.0 and later. Use an older navigator (prior to OS 2.0) that supports this functionality if this is important to you.

Other Media Managers: You can use other media managers, for example, iTunes, Windows Media player, and MediaMonkey to create MP3s, WMAs, or MP4s. You can still use Composer ME and Composer HE to add files to Control4.

The Sony 777 Disc Changer uses Gracenote, but the Media Controller can no longer access album, title, or artist information from AMG (the previous lookup service). CDs, however, can be imported and will show up in the Media database with a date and time stamp.

In the Media pane, if you select **CD** or **Disc Changer**, the following options are available. In some cases, you select an entry and click a button, or just click one of these buttons (Search and Scan):

- Edit. Edit an entry's metadata (Title, Artist, Director, Genre, etc.).
- New DVD. Add new DVDs to the media database.
- New CD. Add new CDs to the media database.
- Delete. Delete an existing entry.
- Scan. Scan the media on your CD or disc changer to the media database (recommended if available).
- Search. Search for media titles on your CD or disc changer in the media database.

The following steps show how to add media to the media database using these options.

Prerequisites

Ensure that the CD or disc changer has been added and identified in the Control4 system. Your dealer or installer can do this for you.

To scan media on a CD changer to the media database:

- 1 Select the CD Changer in the Media pane.
- 2 In the Disc Changer pane (right pane), click **Scan**.
- **3** The scan results appear in the Discs pane. After you refresh your Navigators, you are ready to play music.

To search media on a Disc Changer to add to the media database:

- 1 In the Disc Changer pane, click **Search**. The search dialog appears.
- 2 Type the **DVD name** in the blank box. For example, type 'A Beautiful Mind,' and then click **Search**. The 'DVD Title' matches appear in the Search Results window.
- 3 Use the scrollbar if necessary to find the appropriate DVD title.
- 4 Select the DVD title, drag it directly over the empty line item in the disc changer list, and then select it.
- 5 Click Finished.
- 6 Repeat the previous steps for the DVDs/CDs in the disc changer that you want to add to the media database.
- 7 Refresh your Navigators. The media you added is now available to view in the Navigators.

To add and search using the New DVD or New CD options:

- 1 Select CD or Disc Changer in the Media pane.
- 2 Select an 'empty' line item for the New DVD and New CD buttons to appear.
- 3 Click either New DVD or New CD as appropriate.
- 4 The New Movie or New Album dialog appears. In the Title box, enter the DVD you want to play, for example: 'A Beautiful Mind.'
- 5 Click Search.

	Find Art File
No Artwork Available	Paste From Clipboard
	Remove Art

6 When the Search dialog appears, use the scrollbar if necessary to find the appropriate cover art, and highlight it.

You can change the search criteria, and search again if necessary. The possible matches from the web database appear in the Search Results window (see above).

- 7 Click **Next**. You can choose which information to import, and edit any associated information before adding the media to the media database (see screen above).
- 8 Click Finished.
- 9 Click OK.
- **10** Refresh your Navigators. The DVD is available to view in the CD or DVD pane and on the touch screens, MyHome apps, and on-screen Navigators.

Note: If no cover art is found in the file's metadata, then no cover art is associated with the music unless the system is registered in 4Sight, and you can go to the online media lookup (Media view > Edit > Name > Search > Select > Next) to obtain the cover art for your music. Check with your dealer or installer for details.

Auto-scan media in Composer ME

This section applies to a Sony CX777ES Disc Changer.

The benefits of running a Control4 disc changer with bi-directional communications (RS-232), for example, Sony CX777ES, is that you can scan your DVDs or CDs stored in the disc changer to identify, index, and automatically apply cover art and media information. You can have your dealer or installer configure your Control4 system in Composer ME to scan media automatically, or you can set a manual scan using the **Scan** button. The default is to scan media manually.

Notes:

- If you scan a DVD or CD, and the media is not recognized, it will be titled "unknown." You can edit the DVD or CD's metadata and manually provide this information from either Composer ME or the Navigators. If this DVD or CD is then changed to a different slot, the system will apply this same information.
- Because media scanning has been moved to the background, the scanning status is only available through Director status messages. To do this, you can either watch the Director status line or re-select the media to view the content that has been scanned.
- Composer ME does not need to be open to scan media. This lets you use other media managers (iTunes, Windows Media Player, etc.).

Prerequisites

Ensure that the devices you want to scan have been added and identified in the Control4 system. Your dealer or installer can do this for you.

If you want to schedule regular scans, ensure that your network-attached storage is set up and is accessible from Composer ME.

To schedule a regular scan of media from a network-attached device, for example:

- 1 From the Composer ME main screen, select **Media Scanning Options**. To scan your media now (and not set up a scheduled scan), click **Scan Now** and skip the Scanning Schedule in Step 2.
- 2 In the Options pane, set the schedule as follows:
 - Scanning Schedule. Select one.
 - Never-Select if you never want to schedule an automatic scan.
 - Every *x* Days or Weeks (up to 10)—Select the frequency to scan.
 - On the following days—Select Sunday through Saturday.
 - At <time>—Use the up and down arrows to select the time. Highlight AM or PM and type the value: AM or PM.

- Files To Scan. Select a device and extension.
 - **Network File Storage**—Select if you have a NAS (network attached storage) device you want to scan.
 - **USB Drive**—The manufacturer's USB drive appears here. Select if you have a USB drive you want to scan.
 - Extensions—Use the up and down arrows to choose the file type to add or remove. To add a file extension (if it doesn't appear in the list), use the down arrow to select the extension, select Video or Audio, and then click Add. Click Remove to remove that file type from the list.
 - Use Online Media Lookup to improve scan results—Check if you don't want the search to access the Internet for every format lookup, for example, a specific title or cover art. Tip: Properly tagged files will result in must faster access.
 - Remove media from the database if the files no longer exist—Check to remove database information when a media file has been deleted. Be careful, however, because if for example you disconnect a USB drive with media on it, the database files will delete them if checked, and you may not want to delete them if you use the drive again.
 - Update media database if file tags have changed—Check to have the database updated if the metadata changes.
- 3 Click Apply.
- 4 Click **Scan Now** to start the scan immediately or **Stop Scan** if you've started the scan and want to stop it.

Testing the media connection

To test control of media through the Control4 Navigators (System Remote Control, on-screen Navigator, MyHome apps, or touch screens), use the steps outlined in the Control4 *System User Guide*.

Suggested test items:

- Play an album
- Add an album or track to the Now Playing queue
- Play a playlist created in Composer
- Create a playlist at a Navigator (for example, one of the touch screens)
- Play multiple streams of music (play different music in different rooms)
- Play a movie on the television, DVD player, or Blu-ray player

Setting up media for television stations

Use the Control4 Composer ME Media view to set up a broadcast television station and listings for display in the Navigators.

Prerequisites

Ensure that your television is added and identified in the Control4 system. Your dealer or installer can help you do that.

To set up media for broadcast television channels:

- 1 Highlight UHF/VHF or another broadcast media type.
- 2 Click Search.

- **3** When the dialog appears, type your **zip code** in the box.
- 4 Click **Search**, and use the pull-down menu to select **Local Broadcast Listings**. The available channels are populated according to the Search Results.
- 5 Check the boxes to select the desired channels that you want to appear on the touch screens, MyHome apps, on-screen Navigators, and System Remote Control.
- 6 Click OK.

9 Refresh your Navigators. The media can now be selected to view in the Navigators.

Setting up media for radio stations

Use the Control4 Composer ME Media view to set up radio station listings to display on the Navigators.

Prerequisites

- Ensure that your devices are added and identified in the Control4 system. Your dealer or installer can do that for you.
- Ensure that you have a tuner in the system.

To set up media for radio stations:

- 1 Under Broadcast, select the radio type: AM Radio or FM Radio.
- 2 Click Search.
- **3** When the dialog appears, type your **ZIP Code** in the box.
- 4 Click Search again. Use the pull-down menu to select AM Broadcast Stations or FM Broadcast Stations if applicable. The available stations are populated in the Search Results window.
- 5 Check the boxes to select the desired stations that you want to appear on the touch screens, on-screen Navigators, MyHome apps, and System Remote Control for that radio type.

6 Click OK.

- 9 Refresh your Navigators.
- **10** Repeat Steps 1-5 for each radio broadcast (AM or FM) you want to set up. Set up each one separately. The media is now ready to view in the Navigators for selection.

Setting up Internet radio

Note: Internet radio supports only MP3, WMA, and MP4 streaming radio stations.

Use the Control4 Composer Media view to add, view and select Internet radio stations that you can play from touch screens, MyHome apps, or on-screen Navigators.

Prerequisites

- Ensure that the controller is installed and identified as directed in the controller's installation guide.
- Ensure that the Internet radio stations you add are in MP3, WMA, or MP4 format. You'll need to create a new form for each station you add.

To configure Internet radio:

- 1 Start Composer and connect to a Director.
- 2 Click the Media view.
- 3 From the Media list, click Internet Radio.
- 4 In the Internet Radio pane, click **New**.

- 5 Fill out the form:
 - **a** Name—Add the name of the station.
 - **b Description**—Add a description that's meaningful.
 - c Channel—Add the URL for the channel. Note: Locate the URL of the MP3, WMA, or MP4 stream that starts with http://...
 - d Genre-Add a genre if appropriate.
 - e Check Audio Only for listening.
 - **f Cover Art**—If you'd like, you can copy the radio station art to your list. In a browser, go to the link and click **Images**. Click **Find Art File** to locate an image, copy it to your clipboard and then click **Paste from Clipboard**.

g Click OK.

6 Go to the touch screen, MyHome apps, or on-screen Navigator and select the Listen > Station. Note: If you have several sources, Internet Radio appears under Sources.

Using external storage devices

Access digital music from an external storage device attached to your Control4 system. External storage devices include USB flash drives, USB external hard drives, or a PC's hard drive on the home network. Set up your music according to the external storage device and networked file storage as described here.

Note: When you remove the external drive (network, USB, etc.), the music is no longer available. To access the music again, attach the external storage device, and then refresh your Navigators.

Prerequisites

External storage devices must have media stored in unprotected MP3, WMA, MP4, AAC, or FLAC formats.

To attach and scan external storage devices using a USB connection:

- 1 Power on the external storage device.
- **2** The documentation for your controller shows you how to attach the external hard drive to the USB port. Check with your dealer for details or to get a copy.
- **3** After connecting the external storage device, scan the music on the external device connected to the controller to make it available on the Control4 system. Highlight the controller to which the external device is connected.
- 4 Click the Media view.
- **5** In the view, select the external storage device.

6 Click Scan. When scanning, the media appears as it is located on the controller.

Note: You can add media from the external storage device when connected to the controller, however, Control4 recommends that you connect your external drive directly to the PC where you want to copy media, and then attach it to the controller for scanning.

To access and scan the network-shared storage devices:

1 Check with your dealer to create a shared network drive.

Example: Using Windows to make a local C:/ Drive directory available on the network, right-click the folder and select **Sharing and Security**. Click **Share this folder**.

- 2 Configure the username, password, and workgroup (or domain) for the network file share. This information varies between types; contact your dealer or installer if you need help with this information.
- 3 Highlight the Network File Storage object.
- 4 Click Add or Scan.

Setting up playlists

Use the Control4 Composer ME Media view to set up a playlist to play songs and albums from your touch screens, MyHome apps, on-screen Navigators, and System Remote Control.

Prerequisites

Ensure that the appropriate audio devices are added and identified on the Control4 system. Ensure that you have scanned your media in the Digital Audio player. Your dealer or installer can help you do this.

Playlists are designed exclusively for streaming media in Digital Audio. If you subscribe to the Rhapsody[®] music service or another service, then Rhapsody playlists can be created using a Navigator. Check the website for your music service or the music service's Technical Support for details. In OS 2.0 and later, playlists can include CDs/DVDs, broadcast channels or stations, or Internet stations, but they are in a separate playlist from those in Rhapsody or your preferred music service.

Note: To set up a Rhapsody subscription, create a Rhapsody account at *http://www.control4.com/rhapsody*, and then refer to the information found in the Control4 *System User Guide*.

To create a playlist:

- 1 From the Media menu, select New Playlist.
- 2 A 'New' playlist appears. You can rename it now, or later you can right-click and select **Rename Playlist** to change the name. **Example**: Change **New** to **Frank's Playlist**.
- **3** Drag the list of songs to the playlist.
- 4 (Optional) Have your dealer or installer add any albums or songs you want to the playlist. See Control4 *System User Guide* for details.
- 5 Create, edit and play songs from your playlists using your touch screens, MyHome apps, or on-screen Navigators.

To delete albums or songs from the playlist:

- 1 After you add the albums, select the playlist that contains the songs to delete.
- 2 Right-click on the songs you don't want in your playlist, and select Delete.

Tip: To remove multiple songs, press **Shift**, select the songs, and then right-click **Delete**.

Editing media information

Use the Control4 Composer ME Media view to edit CD or DVD media information. You can edit media information also on the touch screens, MyHome apps, or on-screen Navigators.

Prerequisites

Ensure that the appropriate media devices have been added and identified to the Control4 system. Your dealer or installer can help you do this.

To edit CD information:

- 1 In the Media view, double-click the device on which you want to edit a CD, for example, a CD changer, disc changer, controller, or digital audio.
- 2 Click the **Edit** button, or double-click the media under <Media> Title.
- **3** To edit and enter any changes, click the **Album** tab (for music), for example. Edit the information in the **boxes** under Name, Artist, Label, or Genre.
 - Click the **Tracks** and **Notes** tabs to view and edit Track Titles and Notes.
 - Click Find Art File or Remove Art to change the cover art.
- 4 When you are finished, click OK.
- 5 Click one of the **Search** buttons next to the Name to search the database for similar entries.
- 6 To select a search result, select the album Title and double-click, or click Next.
- 7 At the next screen, view and edit the album information, including Name, Artist/Composer, Label, Genre, Year, Art, and Notes.
- 8 Make your changes, and click **Finished**. To return to the previous screens, click **Back**.

To edit DVD information:

- 1 In the Media view, select the disc changer or DVD, and then select a movie.
- 2 Click the Edit button, or double-click the title under Discs.
- **3** Click the **Movie** tab. Edit the Title, Director, Studio, Genre, Run Time, Release date, and Rating as desired.
- 4 Click the **Cast** and **Synopsis** tab. Click in the **Cast** and **Synopsis** boxes to make the desired changes.
- 5 Click the **Movie** tab.
- 6 Click Search to search the database for other DVDs.
- 7 Double-click the desired DVD, and edit the information as desired according to the previous steps.
- 8 When you are finished, click **Finished**.

Other Composer ME tasks

Use the Control4^{*} Composer ME to perform other media-related tasks (see the sections below).

- "Clearing a Media List"
- "Exporting a Media List"
- "Importing a Media List"
- "Updating Composer ME"

Clearing a media list

Use the Control4 Composer ME Media menu to clean out information (metadata) about albums and songs.

Prerequisites

Ensure that media has been added and identified to the Control4 system. Your dealer or installer can help you do that.

To clear a media list:

- 1 Select the device on which you want to clear the media information. **Example**: Digital Audio.
- 2 From the Media menu, select **Clear Media List**. This removes the information including the title, cover art, and related information from the media database.

Note: This option does not remove the media files.

Exporting a media list

Use the Control4 Composer ME Media menu to export a media list from your media database to your PC.

Prerequisites

Ensure that the device to export to and the media have been added and identified in the Control4 system. Your dealer or installer can help you do that.

To export the media list:

- 1 Select the **device** on which you want to export the media list. **Example**: Digital Audio.
- 2 From the Media menu, select **Export Media List**.

This saves a copy of the file that contains all the title art and information from the media database to your PC.

IMPORTANT! This option *moves* the media files.

Importing a media list

Use the Control4 Composer ME Media menu to import a media list from your PC to your controller's media database.

Prerequisites

Ensure that the device to export to and the media have been added and identified to the Control4 system. Your dealer or installer can help you with that.

To import the media list from your PC to the Media Database:

- 1 Select the **device** on which you want to import the media list. **Example**: Digital Audio.
- 2 From the Media menu, select Import Media List.

This saves a copy of the file that contains all the title art and information from your PC to your controller's media database.

IMPORTANT! This option does *not* move the media files.

Updating Composer ME

Use Control4 Composer ME to update the software to a new version.

You can update three ways:

- Help menu
- Windows Start menu
- Run the Composer ME install

Prerequisites

Ensure that Composer ME has been installed on your PC.

To update Composer ME:

1 Update according to these options.

- From the Help menu, select **Check for Updates**.
- From the Windows Start menu, select Start > All Programs > Control4 > Composer > Update Composer.
- Run the installation.
- 2 Follow the on-screen instructions to complete the update.

Glossary

4Sight: An Internet service that provides a connection to the home automation system any time and from any place worldwide.

Α

AAC: Advanced Audio Coding. A successor to the MP3 format. A standard, lossy compression and encoding scheme for digital audio. Touts better sound quality.

AV: Audio Video

С

CD: (Compact Disc)—An optical disc that stores digital data. This format is compatible with Control4 products.

Composer: The Control4 software used to design and define a Control4 home automation system.

Composer Pro: Composer is used to set up and configure Control4 devices to communicate with each other in a home automation system.

connection: Devices that are bound or linked together in Composer so they can communicate with each other.

contact: Contacts are generally used to monitor the status of something (door, window, water sensor, etc.) and can be connected through a security panel or directly using a Control4 controller or Contact/Relay Extender. Contacts connected to a Control4 controller or Contact/Relay Extender can be configured either as NC (normally closed) or NO (normally open).

Control4 system: A home automation system designed and developed by Control4.

controller: The main device that makes home automation possible. There may be multiple controllers within a Control4 system. The controller that runs Director is referred to as the Primary controller.

D

device: A component that requires a device driver; code that is used to allow the Control4 system to work with that device.

device driver: Every device in the Control4 system needs a corresponding device driver to control the device.

digital audio player: Provides digital audio streaming capabilities from a controller with hard disk space for music and movies.

Director: Each Control4 controller (such as a Home Controller HC-500) ships with pre-installed Director software (Linux based) embedded in the device. The Director communicates with Control4 products and third-party products to enable home automation and interaction of individual devices. Director runs the Control4 devices. Composer Pro is the software used to connect to and program a system Director that resides on a controller.

DVD: (Digital Versatile Disc)—A media format for video and data storage.

Е

Ethernet: Uses Ethernet category 5 (CAT5 or CAT5e) wiring to transfer data. Ethernet uses a star network topology that allows multiple points to communicate to a single point. The Speaker Point^{*} devices and touch screens use Ethernet to communicate to the Control4 controller.

F

file format: A format used by applications to store/read files.

FLAC: Supported by Control4 since software release 1.8, this is a free, open source, lossless audio codec format that supports tagging, cover art and fast seeking. Audio is compressed with no loss in quality.

н

home network: A network installed in the customer's home that provides an Ethernet or wireless connection so that Control4 devices can communicate with each other.

home automation system: The Control4 system: a line of home automation products that communicate with each other over Ethernet, WiFi, or ZigBee for a total home automation experience.

L

LCD: (Liquid Crystal Display)—A display used with some Control4 interfaces.

LCD Navigator: An LCD device used to control lighting, music, videos, etc., on an LCD screen.

List Navigator: Menu options that are visible on a System Remote Control.

Μ

media database: Media information is stored in the media database, which will permit users to view the media from the Navigators.

metadata: The information that describes the media: title, cover art, artist, song or movie, genre, etc.

MP3: A music format that makes streaming audio available.

MP4: An audio and video format. Can also store images and subtitles.

Ν

Navigator: A Control4 Navigator used with the Control4 system to control lights, music, videos, etc. Navigator is software that the customer interacts with using a universal remote control, On-Screen Navigator, MyHome apps, or touch screen.

network-attached storage (NAS): A hard drive or network share drive that can be attached to the Control4 system and used to retrieve and play music and movies in the system.

0

On-Screen Device: Allows you to select the controller (Media Controller or Home Theater Controller) in the room that controls the source for the on-screen display.

Ρ

playlist: A list of songs compiled in a list. The list can be compiled by songwriter, album, song type, or any combination of the above.

programming: A machine-readable artificial language used to express computations that can be performed by a device.

project tree: A tree view in Composer where the project is layered by the larger branches (Home, Office, etc.) and then the lower branches (floor, rooms, etc.), and finally to the leaf level (drivers).

R

Remote Director: Connects you to the home network while working in Composer from a remote location.

S

scan: An electronic read of media for replay on Control4 devices.

switch: An extension of a router that adds more Ethernet ports to support additional devices or clients on the local network.

System Remote Control: A Control4 System Remote Control is a universal solution that replaces remote control devices from other manufacturers, and includes programmable buttons. This System Remote Control can access on-screen (graphical) Navigators.

Т

touch screen: A touch screen is a home automation system Navigator that controls the home's lighting, music, videos, and other devices on the home automation system.

U

USB: (Universal Serial Bus)—A connector format used with USB drives that connect to a USB port on Control4 devices.

V

virtual connection: A term used in Composer Pro to indicate a connection outside the network.

Virtual Director: A connection to a virtual controller only (a PC is the Director host rather than the controller). Projects created or edited here are benign until the saved project is loaded onto a controller.

W

WiFi: Uses bi-directional wireless technology to transfer data. WiFi (wireless fidelity) devices "connect" to each other by transmitting and receiving signals on a specific frequency of the radio band using a wireless access point. This technology uses the star network topology. WiFi uses high bandwidth 802.11.

WMA: (Windows Media Audio)—Audio data compression technology developed at Microsoft; an audio file format that competes with MP3.

Ζ

ZigBee: A wireless network that uses bi-directional wireless mesh network technology to transfer messages from one device to another. Unlike a star network topology where devices can only send messages to each other by sending them first to a single central device (which then delivers the message to the recipient device), a mesh network topology allows the devices to forward messages from one device to another, thereby extending the effective range of the network. Uses low bandwidth 802.15.4. 250 devices are allowed per controller but Control4 recommends 125.

ZigBee Pro: The 1.1 version of ZigBee that provides improvements in standardization by: allowing more interoperability with other Control4 devices, support for home automation profiles, and improving the scalability of multiple ZigBee access points.
